FOR THE CARE & MAINTENANCE OF ORCHARDS

MAKE YOUR ORCHARD MORE PRODUCTIVE

This brochure is to aid you in selecting tools to make your orchard more productive. The 14 implements shown are key products to insure healthy trees. These tools are the top products used in orchards throughout the world.

Orchard Incorporators

An important application for these tillers with rear rollers is to bury wood chips by tilling 2 to 3 inches deep. The roller then slightly compacts and smooths out the orchard floor. The wood chips will decompose at a faster rate and the rolled out area is then in better condition for the harvesters. Prunings can become a source of organic matter and nutrients in the soil.

Orchard growers report they average 50% less "fill-ups" versus conventional air sprayers.

Brush Processor

Our pull type, PTO driven, self-feeding Brush Processor was designed to shred material up to 3" in diameter into a very fine mulch that will decompose in the rows without affecting your harvesting operations. The brush is fed through two hydraulic driven pick-up feed rotors into the processing chamber. The large 20" diameter rotor with fixed triple tipped tungsten carbide knives shreds the brush against six rows of drop forged re-cutter bars into finer material. This mulch is then forced through a fine mesh heavy steel screen to achieve the desired size.
